This decay spreads and finally involves the entire fruit. It is more prevalent on rough skinned varieties with an imperfect blossom end. Control: Select smooth, resistant varieties and support stalks on trellises. TIMOTHY. I. Chewing Insects. White Qrtib. (See under CORN). II. Sucking Insects. Thrips. (See under OATS). III. Plant Diseases of Timothy Ergot. See under RYE). WHEAT. I. Chewing Insects. Wheat-head Army-Wo-rm. This is a light colored larva, striped with yellow, about an inch in length, feeding upon the seeds of wheat, rye and other grasses, making it appearance in destructive numbers about the time the grain is ripening. The adult moth is of a pale gray color, with a silver-gray margin to the outer edge of the fore wing. Control: If the grain is sufficiently ripe, harvest and thus prevent further injury. Spray infested plants with kerosene emulsion (No. 32 a)....

Reviews

Here is the finest publication i have read through until now. I am quite late in start reading this one, but better then never. I am just easily can get a pleasure of studying a created publication.

-- **Morgan Bashirian**

This publication could be worth a read through, and far better than other. This is certainly for all those who statte there was not a worth reading through. You may like just how the author compose this publication.
